

Stackable transport packaging with integrated handle

CAD no.: g082620

Idea:

The target was, to develop a packaging for bulky merchandise, which on the one hand is easy to transport and to stack and on the other hand is a packaging you can take-away directly from the pallet.

Implementation:

This folding box with hooked bottom flaps features a lid with integrated handle. The transport packaging can be setup and stocked with merchandise easily. Thanks to the integrated handle the handle itself does not have any influence on the stackability. The inline packaging can be printed with up to six colours. When using the print in an intelligent way, the stapled boxes will have an excellent promotional effect.

Technical data:

CAD no.: g082620
Dimensions: 400 x 400 x 205 mm
Flute: B
Fefco: 0216-V
Type: inline packaging

Note

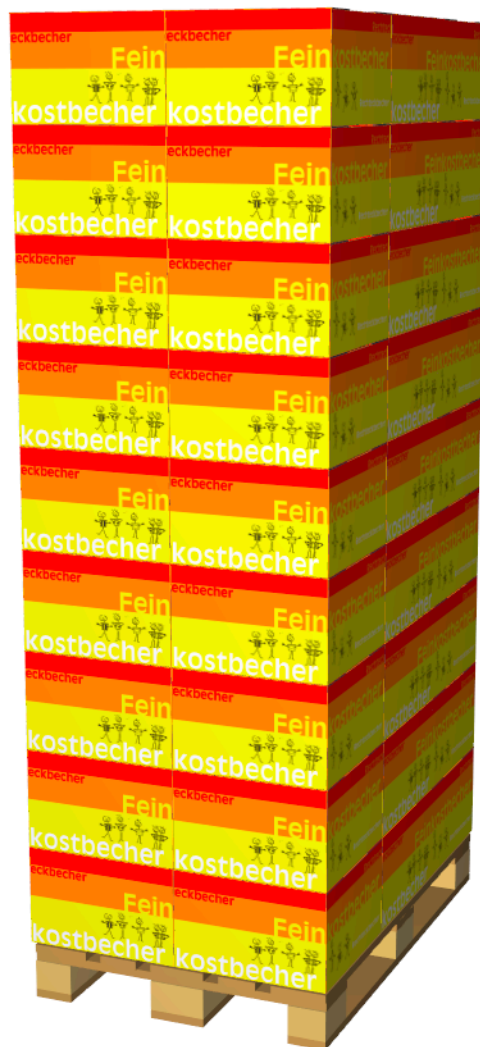

Please click on the graphic to activate it. It is possible to print it in whatever position you require the packaging. All you need for optimum display is the latest Adobe Reader.

Stackable transport packaging with integrated handle

CAD no.: g082620

Stapled boxes

The longitudinal sides look different, because the stack in the middle was turned by 90 degrees. Thereby the writing "Feinkostbecher" on one longitudinal side is completely visible and readable. The appearance of the pallet depends on the way of stacking the packaging.
